

### CORRAL - pento

Paint a single connected set of cells (the corral) so that it does not touch itself, not even diagonally, does not surround any white areas and does not contain any 2x2 painted area. Numbers outside the grid indicate the sizes of consecutive painted blocks in that row/column. Numbers are given in increasing order and not in the order the blocks appear. There must be at least one white cell between any consecutive blocks. Additionally, the formed corral is build up by all different pentominoes, except for the P. Pentominoes may be rotated and/or reflected.
