

# DOMINION

Place some dominoes (1x2 black cells) in the grid, in order to divide the grid into some regions of adjacent cells. Dominoes cannot overlap or touch each other from the sides. It is also not possible to cover a letter with a domino. Same letters belong to the same region, different letters belong to a different region. All regions contain one or more letter(s).

			A							B
							C			
	D				E			B		
F										
						D	G			H
		F								
	G									
								I		
	K			L			I
